

Category: Treatment

I will present an overview of household water treatment, including a description of the various point-of-use (POU) and point-of-entry (POE) products and water treatment technologies, and the types of water quality concerns they each cover. I will discuss the ANSI/NSF standards for drinking water treatment unit products, how ion exchange water softeners and iron removal filters work, as well as popular other technologies such as reverse osmosis, carbon blocks, ultraviolet light, and the newer arsenic remediation filters.
