Nebraska Nutrient Management Plan Document Generator

The Nebraska MMP-AMUP Document Generator is a planning tool for animal feeding operations. The generator works with the Manure Management Planner (MMP) in development of an Annual Manure Use Plan (AMUP). The AMUP includes an annual nutrient use plan, as required for maintenance of a permit to operate a livestock waste control facility (Title 130: Chapter 14; <http://164.119.180.2/RuleAndR.nsf/Pages/130-TOC>; verified Oct 31 2005). The Nebraska MMP-AMUP Document Generator takes information that has been entered into and calculated by MMP to produce a nutrient management plan. The document generated is a Microsoft Word document which can be easily edited. The generated Word document contains some boilerplate text which can be edited, popup lists of Word AutoText to select pre-composed text, and tables created from queries of information obtained from MMP. The document generator allows a major part of the nutrient management plan to be produced automatically and provides guidance to the completion of the plan.
