

USDA-CSREES 2006 National Water Quality Conference

[Camp Creek Watershed Partnerships](#)

As part of the Heartland Water Quality Initiative, our poster will focus on the Camp Creek watershed in central Iowa. We chose this watershed specifically because Camp Creek is located in an area on the periphery of Des Moines, therefore this particular watershed is increasingly seeing more suburban pressures as the city's population expands into the countryside. The themes we plan to cover in this poster are: 1) the agency partnerships that occur in this watershed, 2) the agencies' roles in watershed action and awareness, 3) suburban pressures, and 4) the merging of citizen groups.

This poster will include a detailed description of our study and findings, as well as pictures of Camp Creek and the area around it.
