

USDA-CSREES 2006 National Water Quality Conference

[Using Updates to Educate Policy Makers About Water Programs at Land Grant Institutions](#)

We developed a regional two-page color newsletter called PNWWATER UPDATE that focuses on specific water resource issues in the Pacific Northwest to meet the needs of our stakeholders. This newsletter is distributed to our congressional delegation and all state legislators serving on education, environment and agriculture committees. Fifty-seven policy makers on our mailing list for the last two years evaluated the value of this newsletter. In general, policy makers found the newsletter to be of high quality, timely, informative and that it addressed the water quality priorities in the region.
