[Conflict on the rural-urban interface: How a natural resource issue can divide and unite a community](#)

For this presentation, I will present some of my thesis research looking at conflict on the rural-urban interface surrounding water and other natural resource issues. I will specifically be focusing on the conflict surrounding development and conservation of the Little Salt Fork Marsh on the northern fringe of Lincoln, Nebraska. In the presentation I will include an overview of the background of the area; explain some of the social and environmental problems surrounding Little Salt Fork Marsh; and will provide examples of efforts that are being taken to protect this area from further development as well.
