

USDA-CSREES 2007 National Water Quality Conference

[Southwest States and Pacific Islands Regional Water Program](#)

The Southwest States and Pacific Islands Regional Water Program enables and promotes collaboration among the water programs of the eleven State, Island, and Tribally Controlled Community College Land Grant Institutions within the region. By working together, we have developed and conducted education outreach programs addressing critical water quality and water resource management issues that have reached wider audiences than would have been possible without the collaborative efforts. The areas of focus for our coordinated research, education, and extension efforts are on four water-related themes: Animal Manure and Waste Management, Drinking Water and Human Health, Water Conservation and Agricultural Water Management, and Watershed Management.
