WWW.BIOGAS.PSU.EDU a Biogas Outreach Education Tool

Robert E. Graves, Deborah Topper, and Patrick Topper

Abstract Text:

WWW.BIOGAS.PSU.EDU provides an excellent delivery method to satisfy the need for educational material on production of biogas from animal manures and other agricultural and organic wastes. With minimal resources the group identified, classified and when necessary developed a wide array of web based materials. The goal was to present a comprehensive source of biogas resources. Brief introductory sections and annotations were developed when necessary. To emphasize safety issues involved with handling biologically active materials and flammable gases safety alerts are strategically placed through out the site. Information on Pennsylvania systems and projects are being developed for the site.

Impact Statement:

This project has provided an up-to-date, cost effective and comprehensive source of information on biogas production and utilization in a timely manner with minimal use of scarce resources.
