**Critical Source Area (CSA)  $\approx$  A “hotspot”  
where P and hydrologic source areas are co-located and connected to stream**

# Upper Etowah River Basin Above Lake Allatoona

- Poultry farming since 1940s
- Rapidly growing suburbs
- Lake Allatoona 303(d)-listed
- CSREES-funded exploration of P-trading opportunities

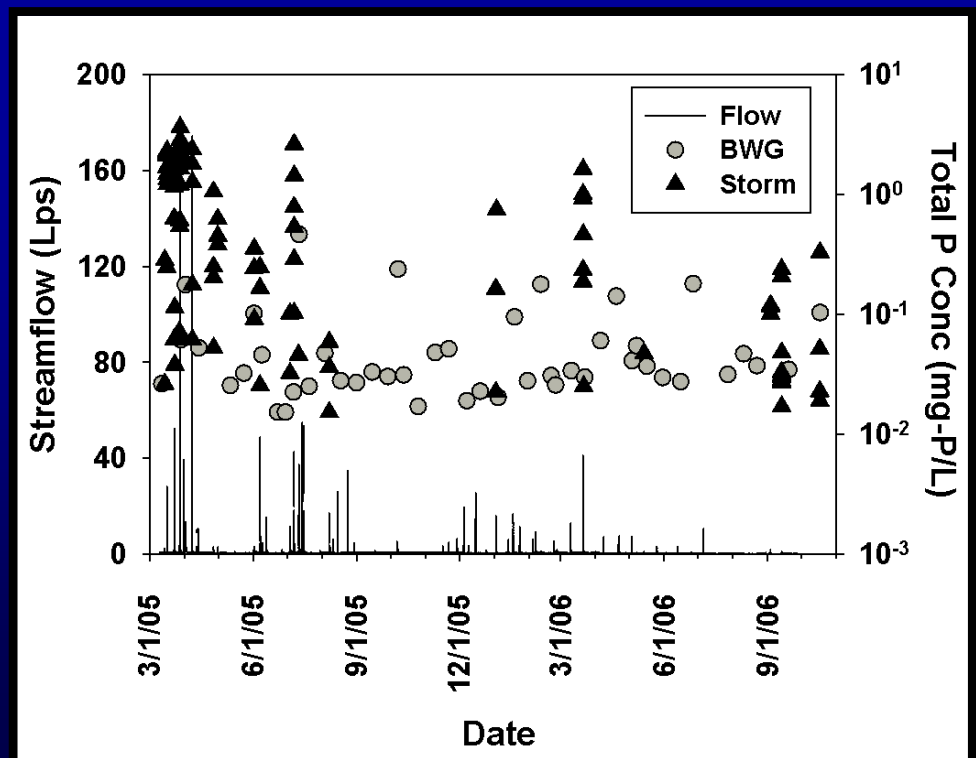

# PREVIOUSLY

## ➤ Phosphorus yields:

- *Forested sites*  
0.01 - 0.1 kg-P ha<sup>-1</sup>
- *Poultry-pasture sites*  
0.03 – 3.2 kg-P ha<sup>-1</sup>
- *Linear relationship with Mehlich-1 soil test P*

## ➤ Streamflow P concentration relationships

- *Among sites*
- *Within sites*

# Objectives

- 1. Identify P critical source areas**
- 2. Characterize runoff-generation mechanisms**
- 3. Examine P forms in different hydrologic pathways**

# Site AG-5 Poultry Farm

Study watershed

# Site AG-5 Watershed Map:

Hydrologic and Soil Sample Locations  
with Interpolated Mehlich-1 Soil Test Phosphorus

## Legend

-  H-Flume
-  Runoff collector
-  Piezometer
-  Stream channel
-  Swales
-  Soil sample (0 - 5 cm)

## Predicted M1 STP (mg-P/kg)

-  16 - 175
-  176 - 283
-  283 - 357
-  357 - 407
-  408 - 441
-  442 - 491
-  492 - 566
-  566 - 674
-  674 - 832

# Hydrologic Monitoring

- *Streamflow*
- *Piezometers (PZ)*
- *Runoff collectors (RC)*

# Stormwater Runoff Sampling

- Collectors positioned near edge-of-field or below swales
- Simple design

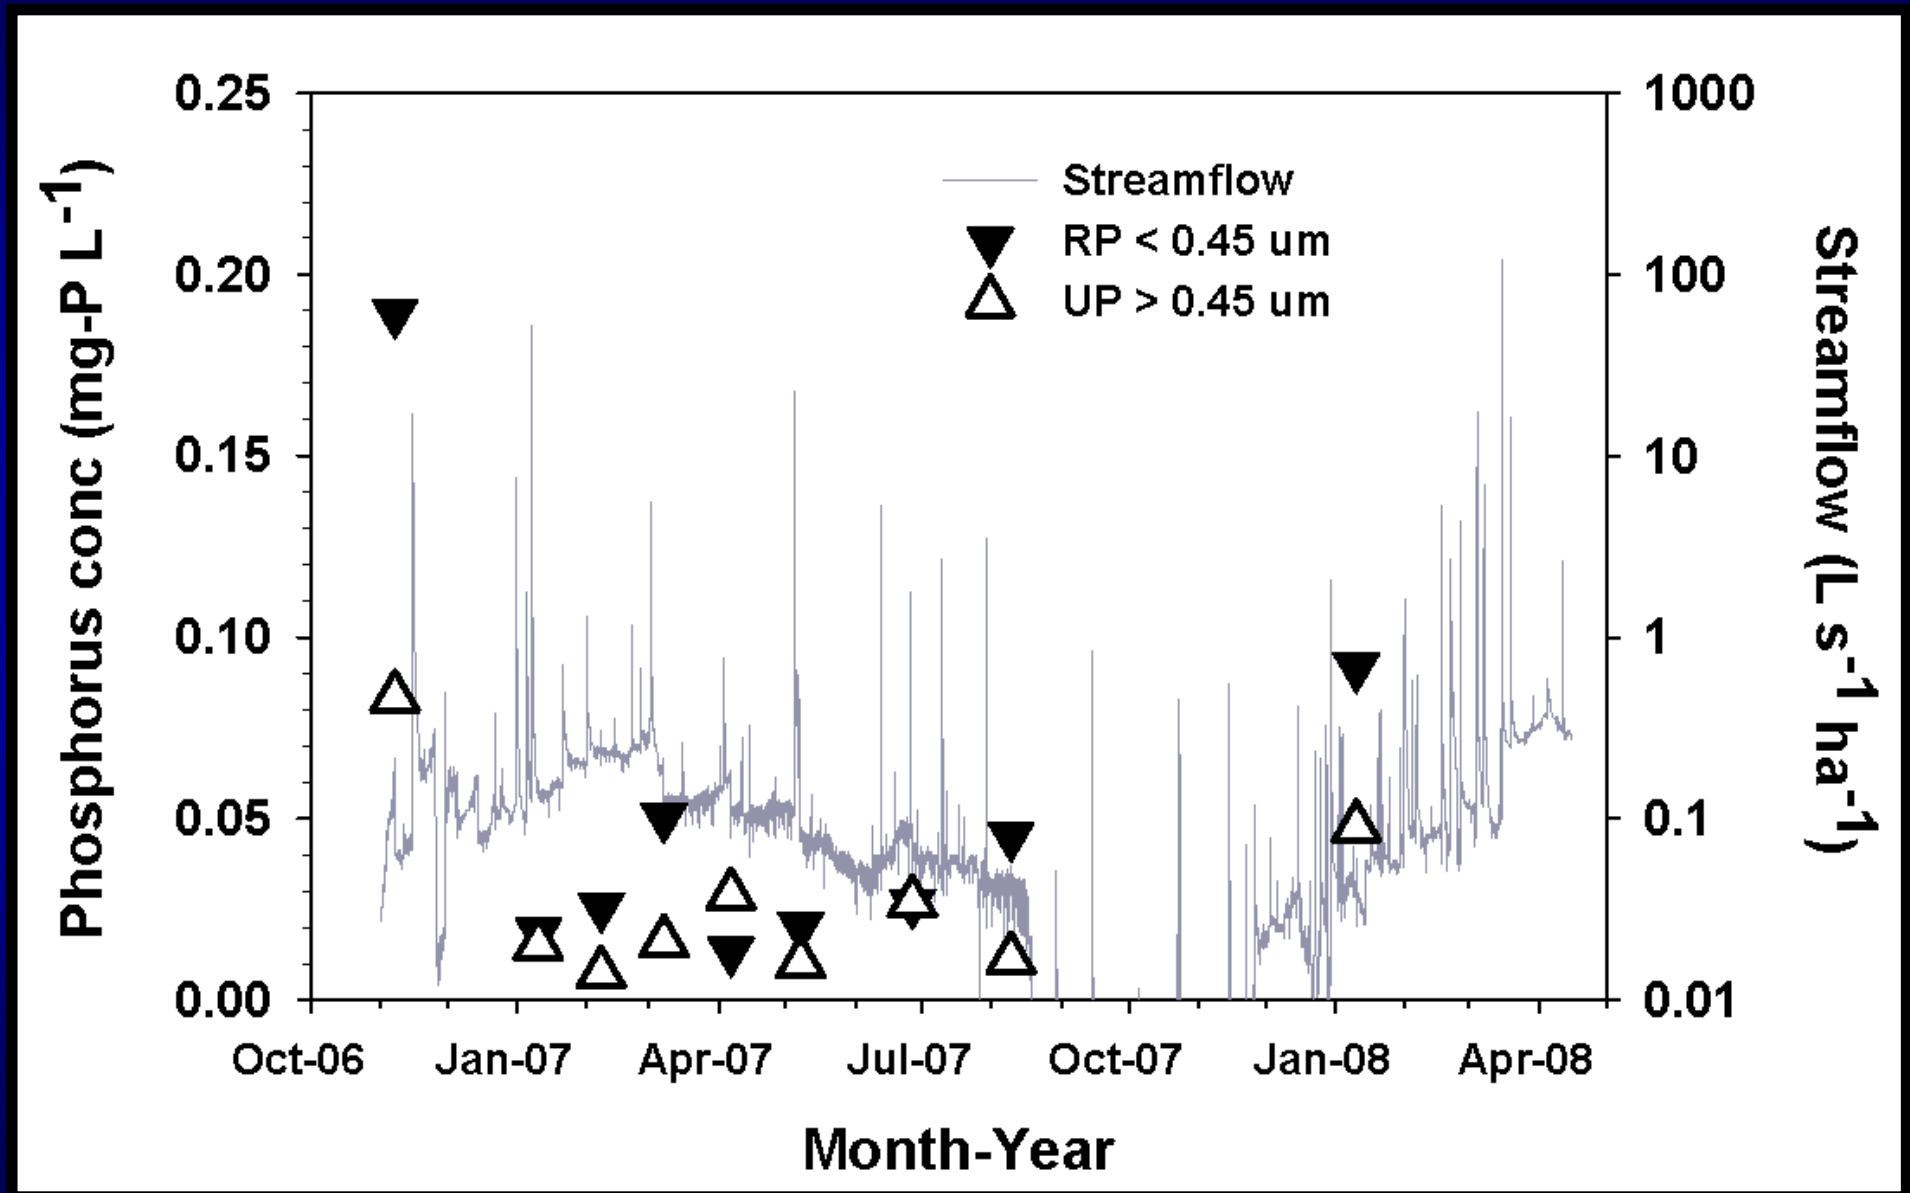

# Water Quality Sampling and Analysis

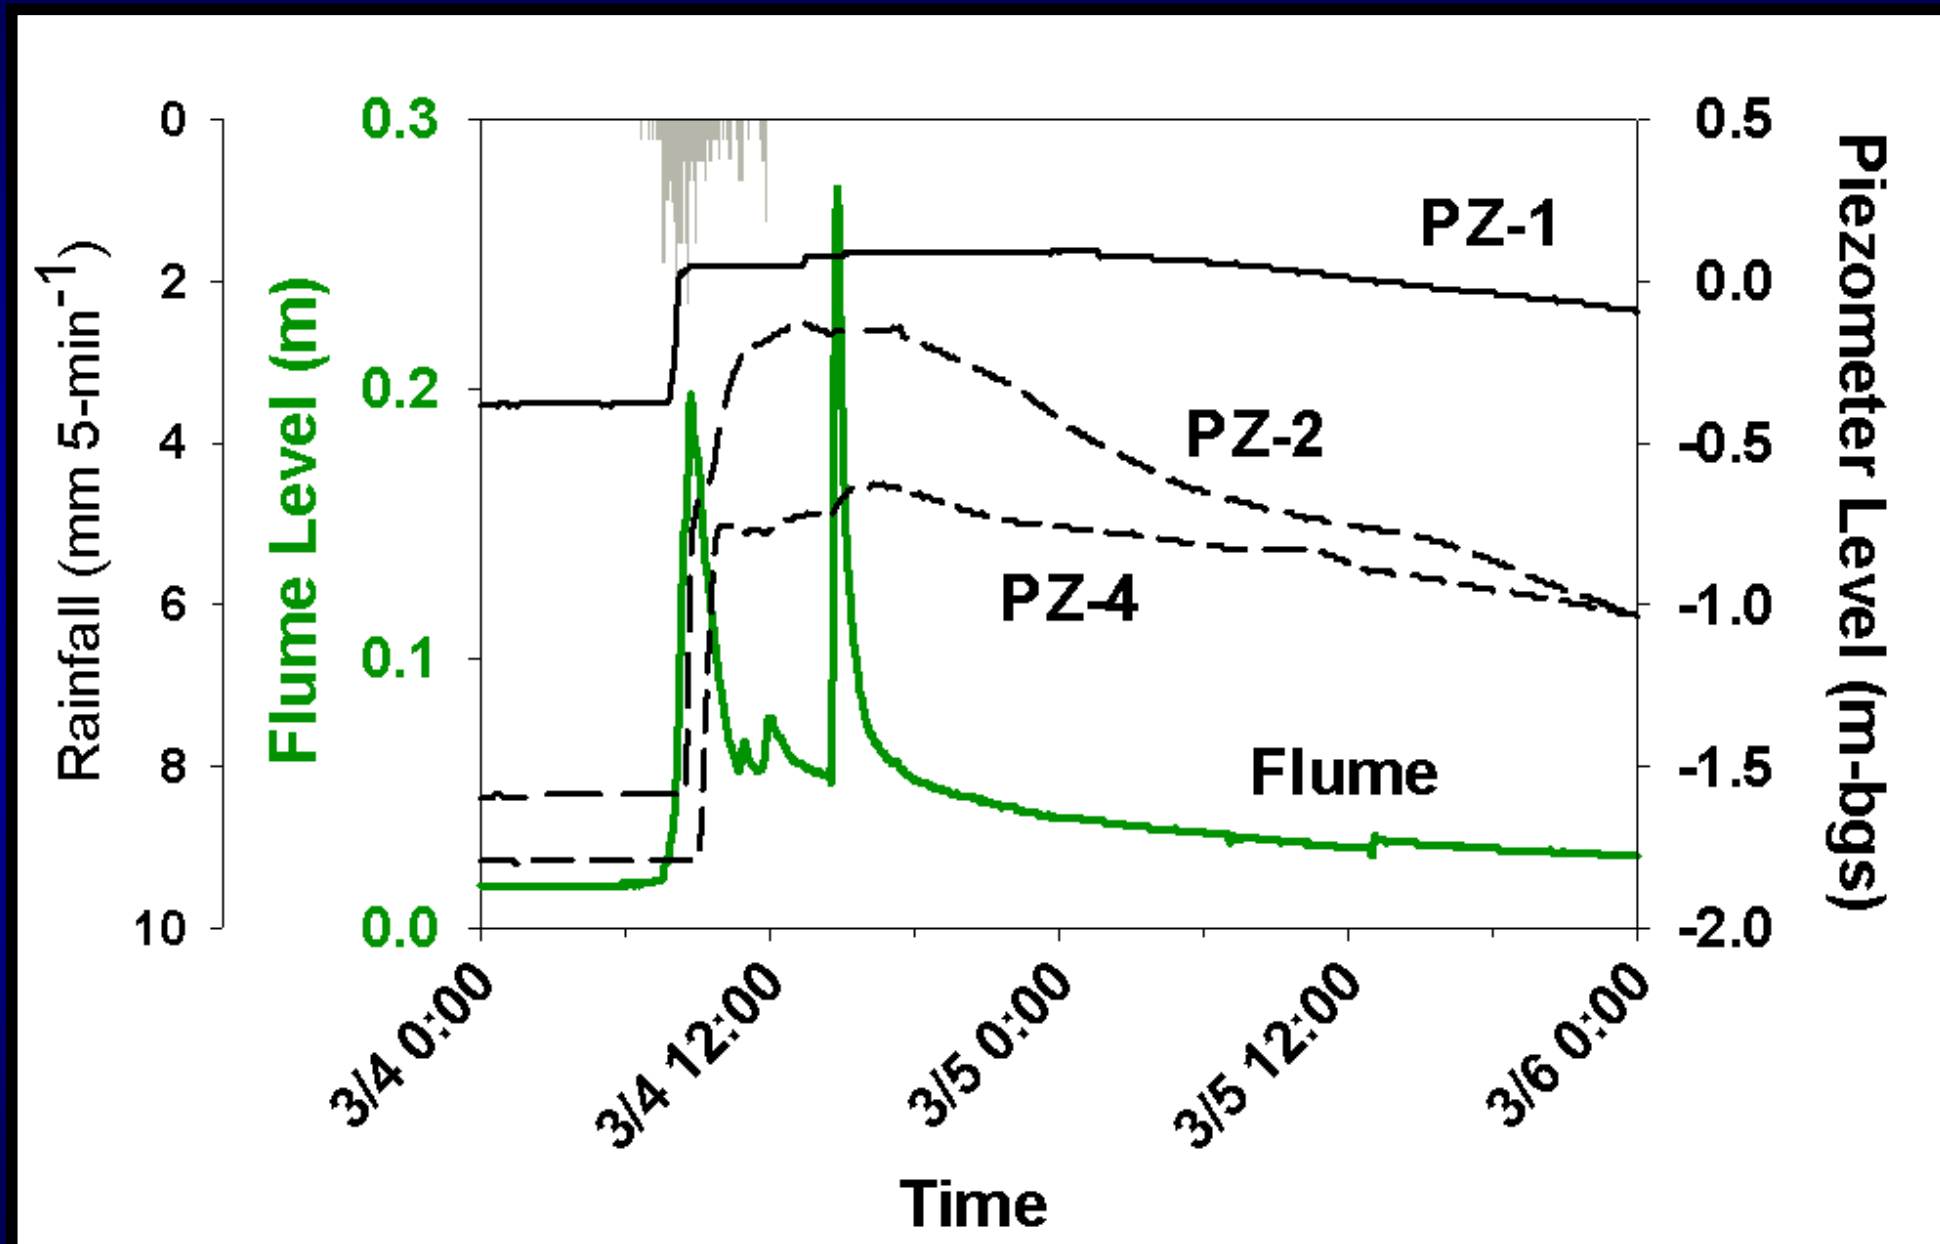

- Monthly sampling
- Storm event sampling
- Laboratory analyses
  - *RP and UP*
  - *< 0.45 um and > 0.45 um*
- Physicochemical parameters

# Streamflow and Monthly Samples—P forms

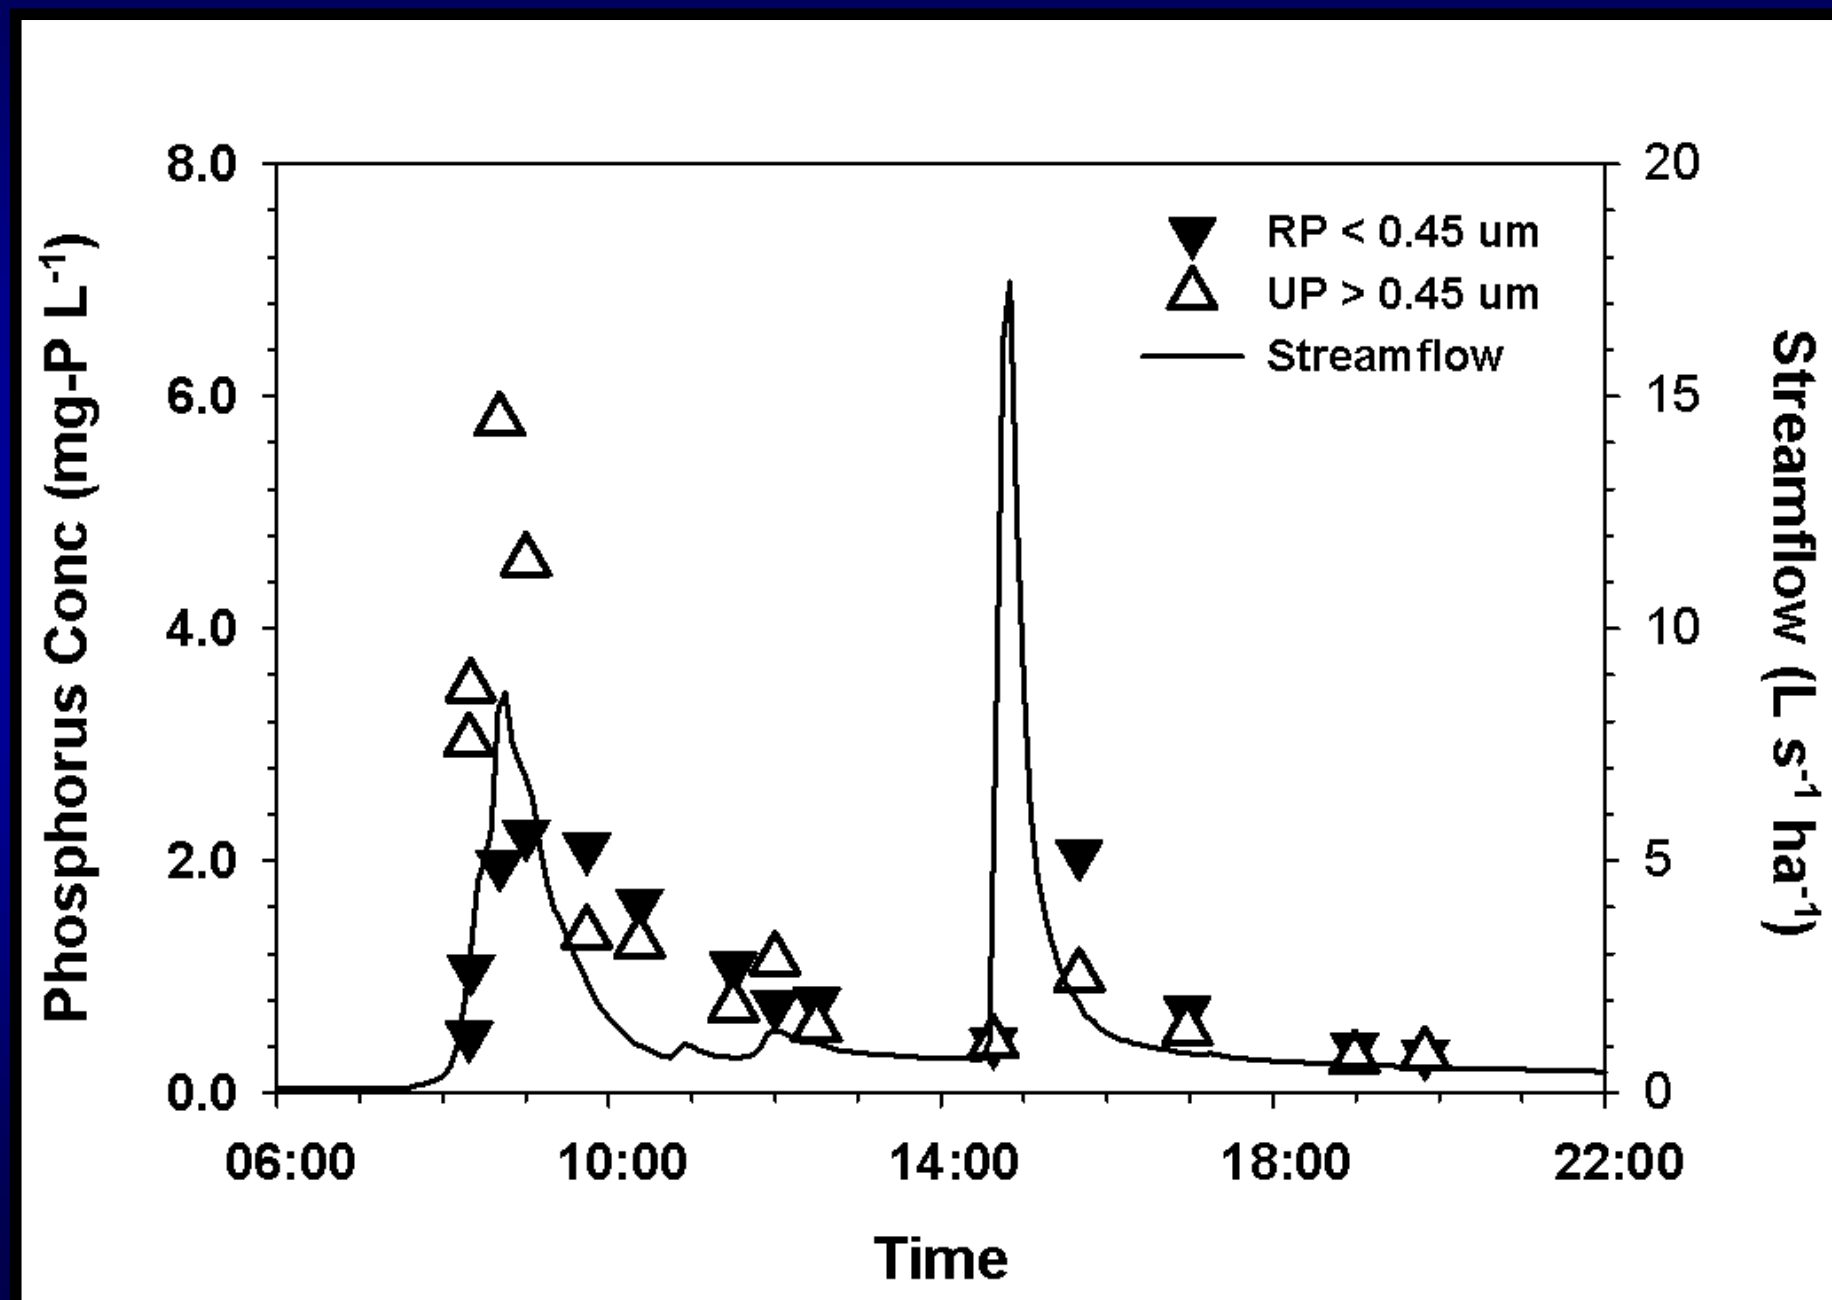

# March 4, 2008 Storm Event—Hydro Response

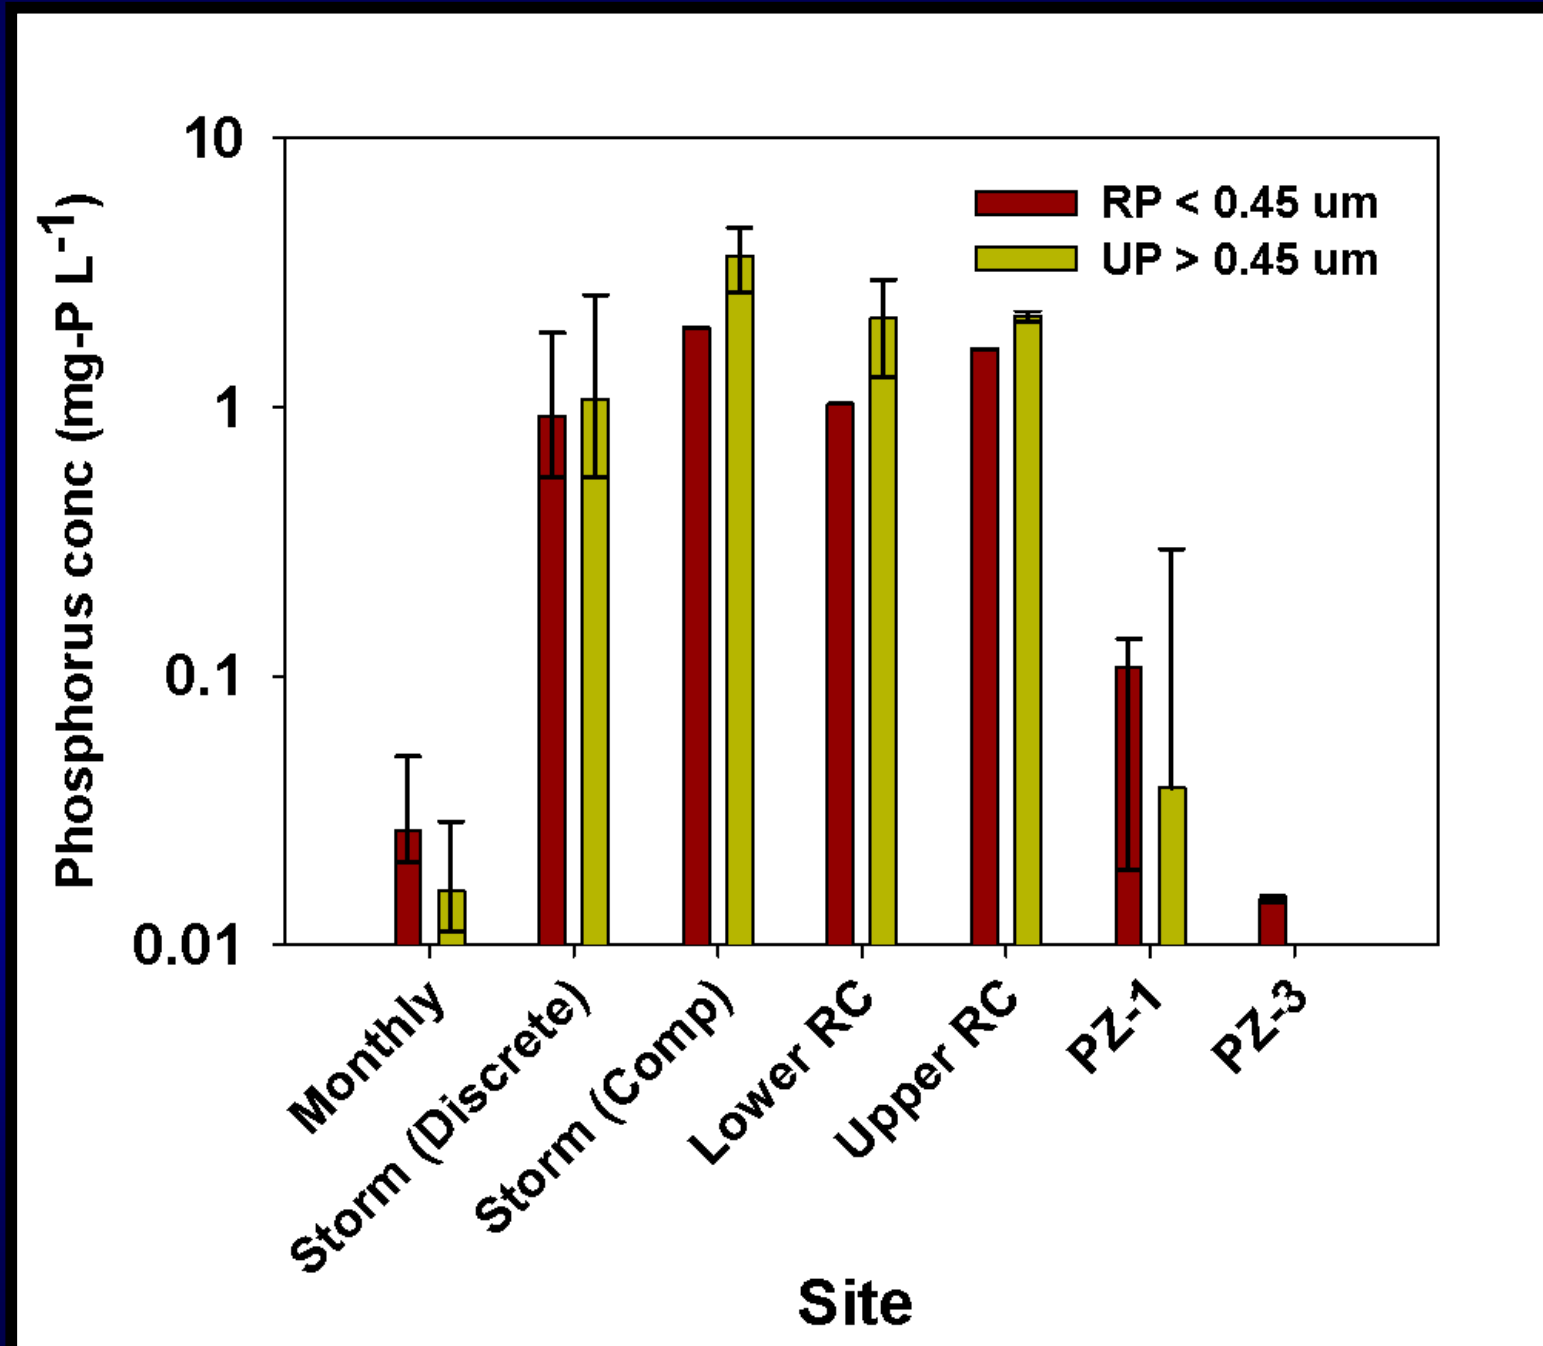

# March 4, 2008 Event\* Streamflow and P forms

\*Litter application ~Feb 26, 2008

# Comparison of P Forms by Pathway + Flow Regime

# Summary

- Elevation gradient in M-1 STP with moderate spatial correlation
- Hydrologic pathway P content varies by pathway and flow regime
- Critical source areas
  - *High P source area coupled with infiltration-excess runoff*
  - *Low P source area coupled with saturation-excess runoff (i.e. VSA)*
